

PROJECT MANAGER – EXTERNAL MANDATE

Allegra Sulai Technologies GmbH (AST)

Location: Switzerland / Hybrid

Engagement: Project-based external mandate

Managing Projects for a More Sustainable Future

At Allegra Sulai Technologies, our philosophy is to use technology to help create a more sustainable and responsible future.

We develop and explore innovative projects in future mobility, drone technology, artificial intelligence, energy systems and emerging technologies. Our goal is to turn ambitious ideas into structured, meaningful and future-oriented projects that create real value for society and the environment.

For this reason, we are looking for a motivated Project Manager who shares our values and wants to actively contribute to the successful development and implementation of our projects.

Your Role

As part of our external network, you will support AST on a project-based mandate, depending on the scope and requirements of each individual project.

Your responsibilities may include:

- **Structuring and coordinating innovation and technology projects**
- **Defining project goals, timelines and milestones**
- **Coordinating engineers, specialists, external partners and suppliers**
- **Monitoring project progress, priorities and next steps**
- **Supporting communication between technical and non-technical stakeholders**
- **Preparing meetings, project updates and decision documents**
- **Identifying risks, challenges and possible solutions**
- **Ensuring that projects remain focused, efficient and goal-oriented**
- **Bringing your own ideas and perspectives into our projects**

Your Profile

Professional experience is an advantage, but not essential. What matters most to us is your motivation, organisational talent and ability to bring structure into complex projects.

You should have:

- **A completed degree or relevant higher education in Project Management, Business, Engineering, Technology or a comparable field**
- **Strong organisational and communication skills**
- **Interest in innovation, technology and sustainable solutions**
- **A structured, independent and solution-oriented mindset**
- **Motivation to contribute to meaningful projects with a positive impact**
- **The ability to coordinate interdisciplinary teams and external partners**
- **Good English skills; German is a must ;)**

What Matters to Us

We are looking for someone who enjoys bringing people, ideas and technologies together.

You should be motivated by the opportunity to help transform innovative ideas into concrete and successful projects. Sustainability, responsibility and the meaningful use of technology should be values that you genuinely identify with.

At AST, you will work closely with engineers, specialists, technology partners and external organisations and help ensure that ambitious projects move forward.

What We Offer

A flexible, project-based external mandate with a high degree of independence and responsibility.

You will become part of a growing network of technology specialists and partners and have the opportunity to support innovative projects from the first idea through development and implementation.

We are looking for people who believe that technology can make a difference.

If you enjoy managing ambitious projects and want to help create meaningful and sustainable solutions for the future, we would be happy to hear from you.
